

graphics::svg::Object

graphics::svg::PathProps< Circle >

graphics::svg::Circle

```
graph BT; Circle[graphics::svg::Circle] --> Object[graphics::svg::Object]; Circle --> PathProps[graphics::svg::PathProps< Circle >];
```

The diagram illustrates the relationships between three classes in the `graphics::svg` namespace. At the top, there are two boxes: `graphics::svg::Object` on the left and `graphics::svg::PathProps< Circle >` on the right. Below these, centered, is a box for `graphics::svg::Circle`. Two arrows originate from the `graphics::svg::Circle` box and point upwards to the `graphics::svg::Object` and `graphics::svg::PathProps< Circle >` boxes, indicating that `Circle` inherits from both `Object` and `PathProps< Circle >`.
